

CBD compounding kits fact sheet

PetCann is now offering CBD compounding kits to veterinary clinics. PetCann CBD compounding kits enable vets to explore the many potential benefits of CBD for animals in their care with the concentration and volume best suited to each patient.

Benefits for your patients and practice

- **No wait time:** Dispense CBD formulations at time of consultation so your patient doesn't have to wait to begin treatment.
- **Flexibility:** Prepare concentrations based on your patient's health needs and flavour preferences.
- **Affordable access:** Create better access opportunities to plant-based alternatives for pet parents.
- **Trial opportunities:** Observe initial patient results by offering trial volumes instead of prescribing large bottles.
- **Clinic profit:** Add your own compounding and dispensing fee on top of your consultation fee.

CBD compounding guidelines

Veterinary practitioners are authorised under all state-based drugs/poisons legislation to obtain, possess, use or supply scheduled substances for the treatment of animals in their care. A compounded preparation should only be used in circumstances where a registered product is unavailable or unsuitable, but as no CBD products are currently registered in Australia, there are no restrictions on veterinary compounding of CBD.

PetCann CBD compounding kits meet all Australian requirements, including:

- **Veterinarians may only prescribe Schedule 4 medicinal cannabis products.**
In Australia, veterinarians may only prescribe Schedule 4 medicinal cannabis products – meaning it must contain 98 per cent or more cannabidiol (CBD) and the total amount of other cannabinoids present must not exceed 2 per cent. Veterinarians are not allowed to prescribe Schedule 8 medicinal cannabis to animals in their care. Cannatrek's supply licenses in each state and territory permit the supply of CBD Isolate, a Schedule 4 substance, to registered veterinary practitioners.
- **Veterinarians may only prescribe imported CBD products.**
Only raw cannabis material or finished human cannabis medicine can be imported into Australia. The import of finished animal cannabis medicine is not allowed. Locally cultivated cannabis products cannot be used for animals as the Narcotic Drugs Act 1967 only covers the cultivation, production, and manufacture of medicinal cannabis for human use.

Why Cannatrek C100™ CBD Isolate Oil?

Cannatrek C100™ CBD Isolate Oil is made in the USA, so it meets the import requirement, and is a frequently prescribed Schedule 4 human CBD Isolate oil containing no THC. Each C100™ CBD Isolate Oil bottle contains 100mg/ml CBD Isolate formulated in a medium chain triglyceride (MCT) carrier oil. Not all human cannabis products are safe or suitable for use in pets as some contain high THC levels, are Schedule 8 or contain other ingredients that may be unsafe for pets such as xylitol. C100™ CBD Isolate Oil has been carefully selected because it meets all safety and legal requirements.

PetCann's parent company Cannatrek has been cultivating, manufacturing and distributing premium medicinal cannabis products since 2017. As a market leader and tech innovator in the medicinal cannabis industry, Cannatrek offers the opportunity to leverage existing licences and well-established supply chains to produce and distribute PetCann CBD compounding kits.

What's in a PetCann CBD compounding kit?

PetCann CBD compounding kits contain:

- Cannatrek C100™ CBD Isolate oil
- Adapter caps
- MCT carrier oil
- Chicken, beef or tuna flavouring
- Amber bottles with lids
- SealSafe adapters
- Oil-resistant syringes
- Flat packed dispensing boxes
- Compounding instructions and measuring tables
- Drug register template
- Product information sheets for patients.
